Future Product Enhancements

We, at TRA, make a tremendous effort of incorporating your ideas and suggestions into IndustrySafe. To address your needs and concerns, we constantly make updates to the software. Please feel free to sign up for our new free support portal at <https://secure.custfeedback.com/TRA/> to provide us feedback on this release, view detail release notes, and provide suggestions for new releases.

Included in this newsletter is a list of the updates that will be applied as part of the IS 3.07 Update. If you have any questions or concerns regarding the update, please contact Gabriel Tompkins, Project Manager (gabriel.tompkins@traonline.com).

3.07 Webinar Series

We will be offering free Webinars covering the new features in the 3.07 Update on the dates below. If these dates and times are not convenient for you please contact us directly and we will be happy to set up additional webinars.

New Training and Incident Dashboards

IndustrySafe 3.07 includes training dashboards such as: most offered training classes, percent of employees with up to date and expired training, training classes with the most past due employees, and attendance and pass rates. Please note that the data displayed in these training dashboards will only be correct if the Facility and Employee Tables are connected (See Facility Table and Employee Table Linkage below)

IndustrySafe 3.07 also includes three new incident dashboards: incidents by worker type, incidents by job title and incidents by time of day.

Scheduled Inspections

It is now easier to schedule inspections in the inspection module and generate scheduled inspection reports. Users can schedule reoccurring inspections very easily and scheduled inspections will now be highlighted in the inspection summary screen. The safety inspection log has been updated to allow users to filter for scheduled (or open/closed) inspections by investigator. Automatic emails will notify investigators of scheduled inspections as well as a log of all their scheduled (open/closed) inspections. A new report has been added that allows users to trend on detailed inspection checklist items. An export feature has been added that will allow users to export detailed checklist item information.

Observations Module

The Observations Module has been significantly re-designed so that data entry of safe and at-risk behavior is much easier and quicker. This re-design more closely matches the checklist approach that is used with observation cards and by most organizations who track data for a behavioral based safety program. Almost all of the fields on the observation form can be configured by System Administrators (and the reports adjust accordingly). There is also a new report that generates a print out similar to the observation cards commonly used.

Login Photo and Logo Upload

Several clients previously requested that we upload their unique photos to the login page of IndustrySafe (and we happily obliged). Now this feature is available as a self service to all clients, by going to System Functions, Set Up, selecting Photo/Logo upload, and uploading the appropriate image. For clients (or users) who do not have access to the Home Module the Login page photo will automatically appear on login (and for all users when selecting the IndustrySafe logo in the top bar). For clients and users with access to the Home Module, System Administrators can now upload a logo that will display to all users when using the Home Module.

Home Module Face Lift

The Home Module has been provided a face lift with a new modern design for the calendar and task bars. Users can now view their company logo on the home page.

Facility Table and Employee Table Linkage

Employees facilities in the employee table are now be linked to the facilities used throughout the rest of the IndustrySafe software. This connection provides for greater security of data for the training module as well as for training dashboards. For clients who want to match their employees to existing facilities in the system, just re-import your employees with the employee import wizard and follow the appropriate steps. For clients with more complicated employees and facilities, please feel free to contact us directly and we can walk you through the process. Of course, any client with questions about this linkage should feel free to contact us directly for additional assistance.
